Covenant's team members have a wealth of knowledge and experience developed over long careers working within the UK and globally within the British military, law enforcement and the intelligence community.

Our consultants have all worked at a strategic and operational level delivering key elements of the UK Government's counter terrorism strategy focused on the protection of people and infrastructure and other vital business assets.

Our skills, knowledge and experience have contributed to the safety and security of people living and working within the UK and wider afield.

The team has been involved in a diverse range of protective security projects including the 2012 London Olympic Games, HM The Queen's Diamond Jubilee, the 2014 football World Cup and the protective security arrangements for people attending major public and military events within the UK. In 2015 we assisted the Tourism industry in Egypt and Tunisia.

The team has also provided our clients with a range of bespoke training services including table-top exercises to test plans, processes and procedures, a variety of safety and security courses, and presentations and workshops to meet the clients' needs. We are able to conduct training needs analysis to identify your security training requirements.

The world you operate within presents a diverse range of challenging situations. Who you are, what you do and where your business is located will all affect the threats and risks you face. It is your vulnerabilities that will present the opportunities any threat needs to target and exploit.

The world has become a more complex environment in which to conduct business in a safe and profitable way. Whilst as a business it is imperative to look ahead at growth and investment, this can only be achieved if the business is secure and equipped against the varied threats faced by businesses globally.

We all have a duty of care for ourselves, our colleagues and our business partners. As business owners you may also have a responsibility to shareholders in ensuring that your company is profitable and protected against numerous business threats.

Understanding the possible threats, the associated risks and your vulnerabilities can greatly assist us with how we can provide proportionate solutions that ensure you and your people remain safe whilst conducting everyday business.

Technology can provide us with up to the minute information and intelligence about what is happening globally and our experience enables us to deliver local solutions to counter global threats. Security can be viewed as a negative outgoing expenditure, however, we see security as a positive income generator.

Covenant's Security Assessment services provide clients with the confidence to operate in a safe and secure manner by exploring and understanding the threats and associated risks of the environment, the locality and the business and by identifying proportionate solutions.

In essence, Covenant will provide the ability for you to take a more proportionate view of any current, future or perceived threats to your business and your people.

We believe that each client is unique and as such we value the need to provide a tailored service which is designed and delivered to meet our clients' requirements.

Covenant provides a number of services that will assist you in reducing your vulnerability whilst ensuring that your business can function as it should within your business model and plan.

Our services are designed specifically to address your needs, concerns and expectations and therefore enhance your safety and wellbeing at work.

We can provide you with:

- A range of security surveys/audits from crime prevention to counter terrorism standards
- In-depth threat & risk assessments
- Physical and ICT Penetration Testing
- Our full portfolio of services, reinforced with the latest intelligence and threat reporting.

Our overriding aim is to reduce the vulnerabilities associated with businesses in order to help our clients to assess and consider all elements of their security policies and procedures.

Security Surveys

Covenant security risk specialists have a wealth of knowledge and experience in identifying the threats and risks to business and the subsequent vulnerabilities.

This defines our straightforward approach; to identify your vulnerabilities aligned to the threats and risks you face, examine your compliance obligations and provide you with the solutions for you to continue to work and live safely and securely in the knowledge that your protective security is commensurate to the risk and to your business requirements.

We will identify where your current security regime is vulnerable to targeting and exploitation, affecting the safety and security of your staff, customers, business processes and other key assets.

Through a structured, systematic approach (using the 'JASPAR' model, right) we will provide you with a comprehensive non-technical report detailing our observations, the associated risks and cost-effective, proportionate solutions integrated with existing good practice, delivering organisational benefits.

JUSTIFIABLE – It is imperative that the solution recommended to counter the actual or perceived threats is both sufficient and proportionate

ACHIEVABLE – Within the business model and local environment, all security solutions must be capable of delivering the required protection

SUSTAINABLE – It is essential that the solutions identified feature manageable service requirements and are seamlessly incorporated into business process, enabling continued effective and efficient operations

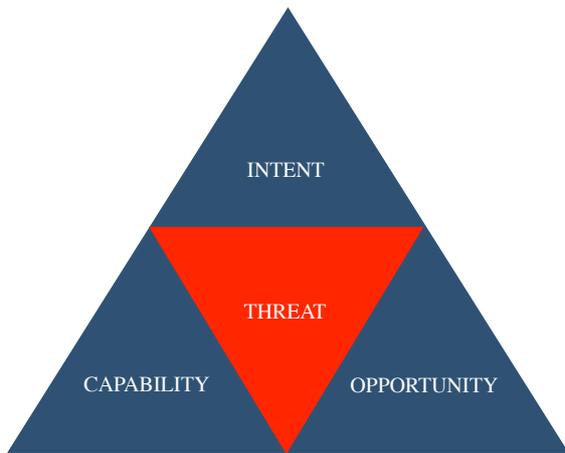

PRACTICAL – Security solutions should always be designed to meet a specific need and by functioning effectively will complement business capability

AFFORDABLE – Security solutions that pay for themselves by utilising technology and experience

REASONABLE – Identification of the range of threats posed balanced with a thorough understanding of the business requirements will deliver an integrated security package matched to your profile, the threat environment and your budget.

Covenant threat and risk assessments provide you with clarity about the threats you may face as part of your safety and security planning aligned to your business.

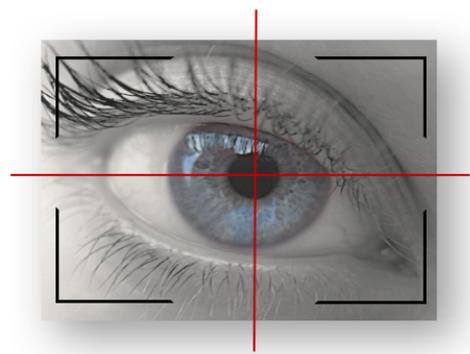

We apply a 360 degree assessment process focusing on your business, the environments you work within, your work colleagues and business partners and the processes and functions you conduct and provide.

We assess how you can be targeted and exploited by individuals and groups ranging from opportunists through to organised crime groups, including domestic extremists and terrorists. Our conclusions will take into account the key threat 'drivers' which are; intent, capability and the opportunities to be exploited. This will allow us to identify a proportionate assessment of each threat we identify.

Thereafter, we will provide you with an assessment specific to your needs. This assessment will enable you to make informed and proportionate decisions regarding your business policies and procedures.

We use our intelligence partners to identify overt and covert threat-based intelligence, allowing us to review the Threat, Risk and Vulnerability assessment on a regular basis, enhancing your awareness of any changes in situations whilst reassuring you and your people and instilling confidence in your business.

We are happy to discuss your needs, concerns and expectations regarding this service. All of our services will be conducted under the terms of the Data Protection Act 1998 and all of your prior information will be handled as 'Commercial in Confidence'.

Our experience in the field of Penetration Testing has evidenced that this specialist area of security testing is misunderstood and has been devalued in its use.

At Covenant we believe that a penetration test should be the catalyst in a security review to quality assure the investments made in security.

We work closely with our clients to gain the information we require to shape and design a bespoke test that addresses your concerns. Whether a physical or electronic test is required, we insist that all tests are controlled and managed in line with company policies and the Health and Safety at Work Act.

The success of all and any tests is the need to ensure that the credibility and standard of the test is maintained and limited to ensure a fair test is achieved. Although this is our service, it is your test and your business.

We will provide you with a report detailing the results of the test which will enable you to make informed and proportionate decisions regarding your business security policies and procedures.

We are happy to discuss your needs, concerns and expectations concerning this service. All of our services will be conducted under the terms of the Data Protection Act 1998 and all of your prior information will be handled as 'Commercial in Confidence'.
